toc

#### 1.introduction

purpose

applicability

references, bibliographical and related material

definitions

#### 2.general considerations

general

structural and geotechnical coordination

design considerations

nature of loadings

foundation material

identification and evaluation of pile

alternatives

field responsibilities for the design engineer

subsurface conditions

pile instrumentation

#### 3.geotechnical considerations

subsurface investigations and geology

laboratory and field testing

foundation modification

ground-water studies

dynamic considerations

pile load test

selection of shear strength parameters

#### 4.analysis and design

general

design criteria

pile capacity

settlement

pile group analysis

design procedure

special considerations

#### 6. engineering considerations pertaining to construction

general

construction practices and equipment

pile driving studies

control of pile driving operations

results of corps experiences

as-built analysis

field evaluation

#### 7.field pile tests

general

decision process

axial load test

monotonic lateral load test
