

# METHOD STATEMENT

## Sikagrout® -200

DATE, : 07/2015

VERSION NO.01

SIKA EGYPT

ENG.ASHRAF ELZINY

**TECHNICAL DEPARTMENT**

**BUILDING TRUST**

**Scope:** *Sikagrout*<sup>®</sup>-200 is a pre-bagged, cementitious, precision grout that expands in one stage to sufficiently counteract the plastic shrinkage normally associated with cement grouts.

Suitable for use in tropical and hot climatic conditions.

## 1. Preliminary Works and surface preparation

- 1.1 Concrete surfaces should be clean, sound and free from oil, grease, cement laitance and all loosely adhering particles.
- 1.2 Absorbent surfaces should be saturated thoroughly. Metal surfaces (iron and steel) should be free from scale, rust, oil and grease.

## 2. Mixing

- 2.1 Add 3.0 – 3.25 liter water for 25 kg powder
- 2.2 *Sikagrout*<sup>®</sup> 200 must be mechanically mixed using a forced action mixer or in a clean drum using a drill and paddle (max. 500 rpm).

## 3. Application

- 3.1 Before pouring, however, let the mixed grout stand for approximately 5 minutes after mixing to allow entrapped air to escape.
- 3.2 Pour the mixed grout into the prepared area such that the grout has the shortest distance to travel. Ensure that air displaced by the grout is allowed to escape.
- 3.3 When carrying out base plate grouting, ensure sufficient head of pressure is maintained to keep mortar flowing.
- 3.4 Exposed areas of the mortar surface should be kept as small as possible.

## 4. Curing

Treat exposed surfaces with *Antisol-E*<sup>®</sup> Curing Compound or use other approved curing methods as mention in the technical data sheet.

## 5. Notes:

- 4.1 Ensure formwork is secure and watertight to prevent movement and leaking during placing and curing.
- 4.2 For large volume area apply Sika Grout 200 by layers each is 4 – 6 cm. thickness. Second layer must be applied after the first one hardness and cool.
- 4.3 Minimum thickness for Sikagrout 200 application is 1.2 cm & Max. layer thickness is 4.0 cm . In case of maximum thickness exceeds than 4.0 cm, it is recommended to apply Sikagrout 200 in layers & the waiting time between layers as soon as the surface of grout's layer hardened and coal.
- 4.4 Where maximum thickness exceeds 100 mm, consider the use of **Sikacrete® 114**.
- 4.5 At high temperatures use chilled water for mixing to keep grout temperature below 30°C.
- 4.6 In hot weather, base plates and foundations must be shaded from direct sunlight during application and curing time.
  
- 4.7 The addition of up to 100% of dry single size and clean aggregates is possible. Trials are recommended to confirm the suitability of aggregates to be employed.
